1. User guide

1.1 Power supply

Make sure connect the unit to a negative ground 12V-16V D.C power supply; please do not connect to DC24V truck or bus, otherwise, the unit will be damaged.

1.2 Notice

A. Do not expose the unit directly under sunlight or install the unit at an environment of excessive heat or humidity. Also avoid places with too much dust or the possibility of water splashing.

B. The rearview camera function and navigation function provided only to be as aid for you driving. We assume no responsibility for any accidents arising from this. If using the unit will detract your attention, please do not use it, and also to make sure it will comply with the actual road conditions and obey all traffic rules and laws.

C. The date provided by the navigation software may not be consistent with the actual traffic conditions because of accidents, road construction or other unforeseen developments, so just for reference.

D. Please do not raise the volume level too high and do not wear headphone when you are driving, otherwise you can not hear the traffic situation and emergency signals from outside of the car.

E. Please make sure to start the engine when you use this unit, otherwise the storage battery may run out.

F. This unit is designed to operate through the touch panel. The touch screen maybe scratched or damaged by harsh or sharp objects.

[Warming]

Please do not install and repair this navigation system by yourself. The person who does not have training in electronic equipment and car accessories to install or repair this navigation system, it will be possible to cause dangerous accidents.

[Safety Statement]

In some countries it is illegal to watch TV/DVD while driving. For you and other people's safety, please don not watch any program or related operations while driving. The rearview camera function is provided only

as an aid for reversing car. We assume no responsibility for any accidents arising from this.

1.3 System upgrade

Please follow the technician's instruction to upgrade the systems software.

1.4 Power on

Make sure the ACC ignition switch has already been turned on, and then press the power button on the unit panel.

1.5 Power off

Long-time press the power button on the unit panel, the unit will go into sleep mode.

[Notice]

If you want to turn off the car supply power, please turn off the unit firstly.

1.6 System rest

Click "RESET" when the unit is no response.

The following conditions will cause the unit no response:

The switchover process of screen delay, stagnant cause the frame's switchover is not successfully, so play the higher solution video file and not support file format, causing the unit has not response in a long time, and click the power supply no use, then you can click "RESET" to restart the unit and it will return to normal.

1.7 Micro SD card

This system can support the multimedia file play copied in Micro SD card and the navigation that map data is stored in Micro SD card. Please make sure you set the GPS navigation path (setting method reference 3.10.1 GPS navigation map path setting), to ensure that you can operation GPS navigation map program successfully.

[Notice]

A. Do not take out the Micro SD card when the unit is running the navigation software or media playing to prevent illegal operation, which the file damaged.

B. Do not press and bend the Micro SD card to avoid the Micro SD card drop out and hits.

C. Do not expose the Micro SD card directly under the sunlight. Do not use or store it in a humid or corrosive environment. Keep away from liquid, heat sources and extreme temperature.

D. Take note of the right direction for inserting the Micro SD card into the slot in case the slot or Micro SD card is damaged due to carelessness.

1.8 USB connector

User can connect the U disk through the MINI USB connector on the unit panel, and play the multimedia file in the storage device.

【Notice】

A. Please make sure the unit is powered on before using.

B. Please make sure the form of the U disk is FAT32 from before using the U disk.

C. Please use the USB cable from the unit package, connect the MINI USB with the “MINI USB” connector on the lower right of the unit panel.

Function introduction

GPS	GPS navigation
Radio	Radio
Multimedia	Multimedia(include DVD 、 USB、 AUX、 SD 、 IPOD)
BlueTooth	Bluetooth
Settings	Setting

3.1 GPS Navigation

3.1.1 Operation instruction

Click  icon in the main menu to start GPS navigation map program.

3.1.2 Navigation software

The unit positions and shows the current coordinate in navigation map correctly by its built-in GPS receiver. After user inputs a route setting, GPS navigation will guide the user to reach the destination safely and efficiently. You will enjoy the personalized service which provided by the navigation system with the cartographic visualization, timely animation, speech sounds prompt, words prompt etc. make your road trips more

safely, comfortable and happy. More details about the navigation function please reference relevant Navigation software manual.

[Notice]

A. Make sure the unit has been installed the external receiving antenna before using, otherwise, you can't receive and position the satellite signal.

B. If re-inset the map card, please make sure to reset the GPS navigation path in advance (setting method please refer to system setting 2.12.1 GPS navigation map path setting), otherwise GPS navigation can't start normally.

[Notes]

A. The date provided by your navigation software map maybe not very consistent with the actual traffic condition, because of accident, road construction or other unforeseen developments. When in actual use, please do comply with the actual road condition and obey the traffic rules and laws.

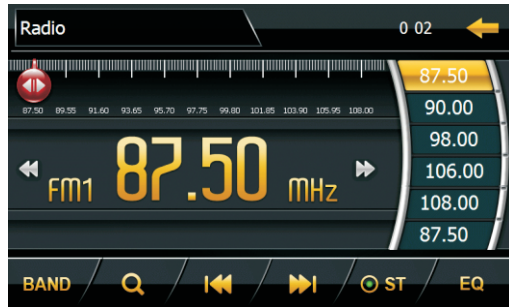

B. The car navigation system just only provides the route for reference; please decide whether choose this route according to the actual road conditions. Limitation from the map software calculation, the driver can make their own choice according to the experience, which will be more convenient and efficient.

C. Many factors, such as being between high and dense building, in a tunnel or underground parking structure, under the viaduct, sudden weather change, or the closure of the satellite signal may affect the reception of the GPS satellite signal. These can result in an inaccurate position and reading or even malfunction of the navigation system.

3.2 Radio

3.2.1 Operation way

Click on the main **Radio** menu to the interface of Radio shown the figure as below:

-  Return main menu function

-  Band switches function keys.

-  Short press: browse; Long press: search the radio and save automatically

-  Short-press is for change to last radio station, long-press is for downward scan.

-  Short-press is for change to next radio station; long-press is for upward scan.

-  On or off the stereophonic sound effect

-  EQ switch over function

-  Short-press is upward to enter frequency, Long-press is for upward scan

-  Short-press is downward to enter frequency, Long-press is for downward scan

3.3. Multimedia

Operation method

Click on the main **Multimedia** interface to change currently screen to Multimedia main interface.

3.3.1 DVD player

Click  on the Multimedia main interface enter into DVD player interface shown the figure as below:

-  Return main interface
-  Last song
-  Play/Pause
-  Stop
-  Next song
-  Page down

Click  icon, enter into nest function interface

-  Page up
-  Fast Backward
-  Fast Forward

3.4.6 Setting

Click  icon enter into Bluetooth setting interface shown the figure as below:

Click  shows keyboard.

You can set Bluetooth name and connecting password based on your needed.

3.5 System setting

Click  icon enter into system setting interface. We can left and right slip to page shown the figure as below:

-  System setting

-  Video setting

-  GPS monitoring function

-  Audio setting

-  Navigation path setting

-  Time setting

-  Language setting

-  Touch screen calibration

-  Set steering wheel control

-  Starting up logo setting

3.5.1 System Setting

Click  icon enter into system setting interface, after entered the interface, also can click the button of bottom enter into each setting mode shown the figure as below:

-  Time display switch

-  Handbrake control line switch (turn on this function , you can watching video only the handbrake is pulled).

-  Key sound switch

-  Headlamp checking function switcher

-  Navigation mixed sound function switch (when turn on, the sound of the navigation will come out from front loudspeaker and others mode together, but if do not turn on, the sound of the navigation will come out front sound speaker only.)

-  Radio area choosing function (Notice: users please do

not to setting this function, if set wrong will cause the radio can't receive any station).

3.5.2 Video Setting

Click setting interface icon enter into Video setting interface shown the figure as below:

- Upward increase
- Downward decrease
- Reset
- Standard display mode
- Soft display mode
- Light display mode
- Bright-colored display mode

3.5.3 GPS Monitor

Click setting interface icon enter into monitoring setting interface shown the figure as below:

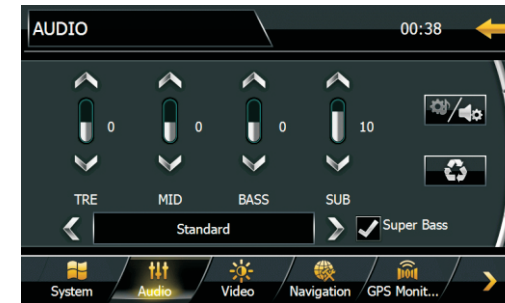

Press the button can reset GPS if it can't capture the signal and also speed up the positioning speed.

3.5.4 Audio Setting

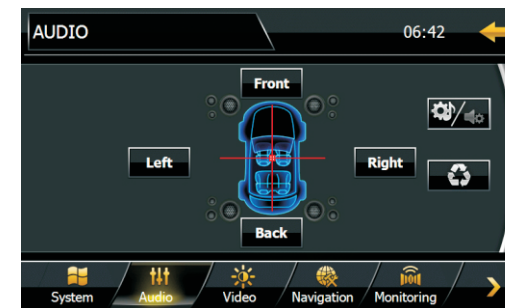

Click setting interface icon enter into Audio setting interface shown the figure as below:

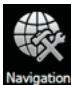

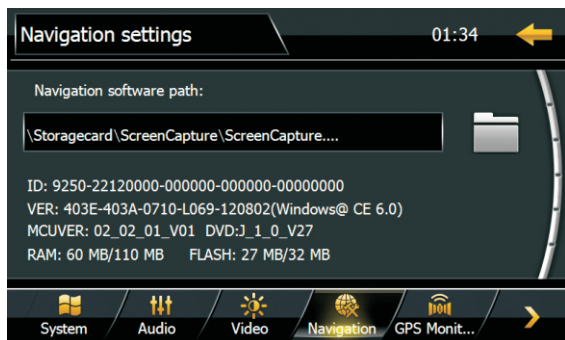

- Upward increase
- Downward decrease
- Page down
- Page up
- Sound effect setting and balance setting switchover
- Sound effect setting re-set function.
- Super bass

Click enter into sound channel balance setting interface shown the figure as below:

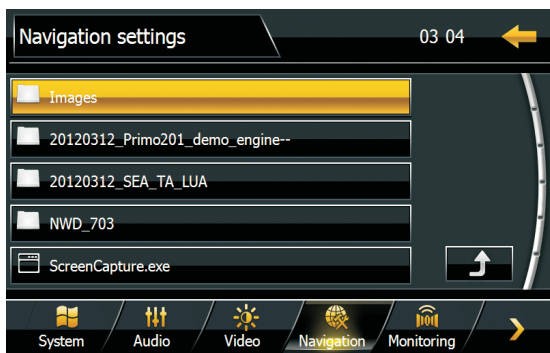

3.5.5 GPS Map Path Setting

Click  setting interface enter into Navigation setting interface shown the figure as below:

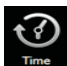

Click folder  icon enter into below interface:

According to navigation file of the map card, choose the map route which you needed (usually the file suffix ".exe" is the route of navigation soft). In this interface, through up and down slip to choose the file you need. After finished choose the navigation route and return, then you can you can start navigation, otherwise, can't start navigation.

3.5.6 Time Setting

Click setting interface  icon enter into Time setting interface shown the figure as below:

Upward increase

Downward decrease

Chosen is 24 hours system, do not choose is 12 hours system

Chosen the Time and GPS' time are same

3.5.7 Language Setting

Click setting interface  icon enter into language setting interface, click the national flag which the language you needed shown the figure as below:

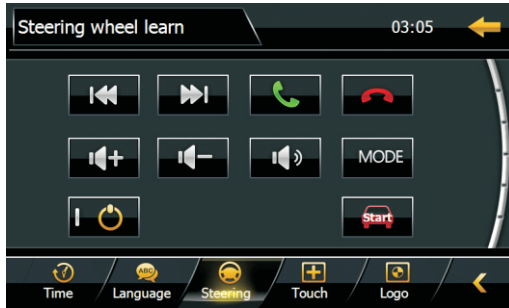

3.5.8 Touch Screen Correction

Click setting interface  icon enter into screen calibration setting interface shown the figure as below:

3.5.9 Steering wheel control setting

Click setting interface  enter into Steering Wheel Control Setting interface shown the figure as below:

Steering Wheel Control Setting

1. Connect the KEY on original car's steering wheel to the KEY cable on the ISO connector. Steering wheel ground to the GND cable of the ISO connector
2. Click the "Start" icon on the lower right corner, the system will prompt "Long press key of wheel", then click the car's steering wheel directly, until the system prompt "select function of key", click the function key which you needed on the screen, at this point, the button which you have chosen will increase some extra green sign. The system will prompt success, then loosen the key of steering wheel control which you have clicked, click the icon "End" in the screen to finish the setting.
3. Repeat 2 step to continue setting others function.

3.5.10 Starting Up Logo

Click setting interface  icon enter into Video setting interface shown the figure as below:
